

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Currently Amended) A mobile recording medium manufactured specifically for a place by a company used for creating an original electronic album of [[a]] the place, the mobile recording medium comprising:

material information provided by the company that is pre-recorded on the recording medium, the material information including at least one of text, an image, audio, and a map relating to the place;

~~situational information that is associated with the material information, the situational information including at least one of a location, a date, and a time relating to the place;~~

a program which, when executed by a processor, causes a system to:

receive ~~user~~ situational information associated with ~~an image~~ information captured by a user, the ~~user~~ situational information associated with the material information and including ~~comprising~~ at least one of a location, a date, and a time of the captured image relating to the place;

search the material ~~situational~~ information ~~stored on the recording medium using with~~ the received ~~user~~ situational information;

determine and display resulting material ~~result situational~~ information, as a result of the search;

~~display result material information associated with the result situational information.~~

2. (Currently Amended) The mobile recording medium according to claim 1, wherein the material information further includes a plurality of opening videos.

3. (Currently Amended) The mobile recording medium according to claim 2, wherein the system displays an opening video associated with the situational information and automatically displays, thereafter, images prepared by the user in a chronological order.

4. (Currently Amended) The mobile recording medium according to claim 1, further comprising an ID (identification number),
wherein the ID enables the system to receive updates via a network for the mobile recording medium, thereby updating the recording medium with new material information.

5. (Currently Amended) An electronic album creating apparatus for creating an electronic album relating to a place, the apparatus comprising configured to receive:

a first recording medium configured to store information ~~images~~ captured by a user of the place and user situational information associated with the information, the user situational information including at least one of a location, a date, and a time of the place, wherein the user situational information is either automatically recorded upon capture of the information ~~images~~ or is provided by the user; and

a second recording medium manufactured specifically for the place by a company configured to store:

- material information provided by the company that is pre-recorded on the second recording medium, the material information including at least one of text, an image, audio, and a map relating to the place;
- ~~situational information that is associated with the material information, the~~
~~situational information including at least one of a location, a date, and a time relating to~~
~~the place; and~~
- a program which, when executed by a processor of the apparatus, causes the apparatus to:
 - search the ~~material~~ situational information stored on the recording medium using ~~with the user~~ situational information;
 - determine and display resulting material ~~result situational~~ information, ~~as a~~
~~result of the search;~~
 - ~~display result material information associated with the result situational~~
~~information.~~
